## **LED Dental Inc. Wins Federal Supply Schedule Contract**

***Company Authorized to Sell its VELscope® Oral Mucosal Examination Device to all US Government Agencies***

**British Columbia, Canada – March 14, 2007** – LED Dental Inc., a Vancouver-based medical device company, recently announced that it has been awarded Federal Supply Schedule Contract V797P-3134M by the Department of Veterans Affairs in Hines, IL.

Although issued by the Department of Veterans Affairs (VA), the contract enables LED Dental to market its VELscope® (Visually Enhanced Lesion Scope) oral mucosal examination system directly to any and all US Government agencies. In particular, the 5.5 million military veterans eligible for VA services represent a high-risk population for the incidence of oral cancer.

“This is a very important contract for us,” said LED Dental President and CEO Steven Semmelmayr. “Not only from a business perspective, but because we believe it’s important to provide military veterans with the best possible standard of healthcare, including the prevention and early detection of life-threatening diseases such as oral cancer.”

VELscope® is an adjunctive oral mucosal examination device that utilizes a narrow band of blue light and specialized filtering technology to help dental professionals evaluate oral mucosa for abnormal areas of concern, such as potentially cancerous lesions that may not be apparent under white light.

The Federal Supply Schedule Contract is effective through February 14, 2012. LED Dental has appointed Debra Vanier ([debra.vanier@led-md.com](mailto:debra.vanier@led-md.com)), Institutional Sales

Representative, to handle enquiries regarding institutional sales.

VELscope's Direct Tissue Fluorescence Visualization Technology platform was developed by the British Columbia Cancer Agency (BCCA) and its U.S. partners, including MD Anderson Cancer Center, with financing provided in part by over \$50 million in grants from the National Institute of Dental and Craniofacial Research, part of the National Institutes of Health, a U.S. government-funded agency.

**About LED Dental Inc.**

LED Medical Diagnostics (founded in 2003) is headquartered in Vancouver, British Columbia, Canada. The company develops and markets medical screening devices based on its proprietary Direct Tissue Fluorescence Visualization Technology platform to aid in the early detection of mucosal tissue abnormalities, including malignant and pre-malignant lesions, to facilitate timely diagnosis and treatment. The company's wholly-owned subsidiary, LED Dental Inc., manufactures the VELscope<sup>®</sup> oral mucosal examination device.
